

Ready to make a difference

Careers and internships in healthcare IT solutions

At CliniSys | MIPS, your IT skills make the difference in healthcare, helping improve lives. Join our committed, enthusiastic and talented team!

A job, a company, a contribution you can be proud of

Helping to develop an advanced laboratory information system creates the necessary challenges and makes every day an exciting and varied day. Working closely with fellow developers, testers and analysts also ensures that you feel satisfied at the end of the day.

Dominick Deman

Software developer, CliniSys | MIPS

You want a job that's more than a job. You want a company in which you can grow and learn, developing your technical, professional and personal skills. You want to be a key member of a strong, committed, technically-talented team.

But even more, you want to know that what you do makes a difference.

At CliniSys | MIPS, we are looking for enthusiastic, talented IT professionals who are eager to join us on our journey to support healthcare in the testing and diagnosis of millions of patients every day. So: are you ready to use your skills to make a difference?

CliniSys | MIPS supports the fight against COVID-19, internationally

During the pandemic our solutions have been supporting communication between laboratories, governmental software platforms, and data agencies.

The Belgian federal government chose our solutions to build its cloud-based federal testing platform, which aims to increase testing capacity, and enhance inter-agency data sharing. We supported the launch of the Dutch CoronIT-platform, connecting 27 laboratories that work with the official COVID-19 testing sites. We worked together with the French government and France's largest hospital group AP-HP to build the national

SI-DEP IT platform – in only 2 months! This platform streamlines ordering and results consultation of all COVID-19 tests.

We also provide essential support to our laboratory customers in the line of fire, as they deal with very high numbers of COVID-19 tests while continuing to perform their daily diagnostic tasks. And we have developed specific functionalities for them, to support the processes related to COVID-19 diagnostics, interface a whole series of laboratory equipment from different vendors, and quickly set up complete analysis platforms.

What we do:

We've been developing premium laboratory information systems and workflow solutions for more than 35 years – and it never gets old! As the European market leader, we are proud that our portfolio makes the difference for 2,500 medical laboratories in 35 countries.

Have you ever had a blood test? There's a strong chance that it will have been processed by our software solution.

Everything we do allows us to touch people's lives and contribute to the delivery of better healthcare around the world.

Our values: are they yours, too?

Customers:

Our healthcare customers are at the heart of what we do, and we devote ourselves to supporting them with ground-breaking software and services.

Simplicity:

There's no need to unnecessarily complicate things! A simple solution is a beautiful solution.

Teamwork:

None of us can do everything alone. By working as a team, we achieve more, grow more, and have fun doing it!

Promises:

Easy to make, harder to keep – but we do.

We offer:

- Challenging and rewarding opportunities for young potentials in an international environment, with a market-leader boasting a 99.6% customer retention.
- A team of dedicated co-workers with different skills, but a shared commitment to combining them to help improve healthcare around the world.
- A dynamic, innovative work environment that encourages you to explore your full potential and develop yourself and your capabilities.
- Opportunities to work in locations across Europe, as well as a progressive approach to flexible and remote working.
- Generous benefits combined with opportunities to change roles and departments, and get promotions that match your progress.
- Various team activities and fundraising events for nonprofits.

At CliniSys | MIPS, there's not one day the same: you can start the day with an empty agenda and then get mega busy within one hour. Training at MIPS is very good, and provides a lot of information. To achieve personal growth, there are also opportunities to follow external trainings. I have grown into different roles, including project engineer (junior and senior) and project manager. So to anyone thinking about making the step, I would say 'Go for it!' CliniSys | MIPS is an accessible company with a lot of opportunities to grow.

Richard Mertens, Project Manager

Who are we looking for?

It takes a lot of diverse roles to stay the leader and continuously innovate. We have IT opportunities for:

- Software developers
- Application consultants
- Support engineers
- Project managers
- Software test automation engineers
- Product and development specialists
- Business analysts
- Sales engineers

Grow, learn and contribute: internship opportunities

We offer interesting internship and trainee opportunities that give you a chance to make a real contribution to our mission, while learning new technical and professional skills. Examples of projects include:

- Setting up a centralised logging solution in Microsoft Azure
- Researching ways to prevent DDoS attacks
- Creating an automated framework for 'smoke tests'
- And more

Think we might be a good fit? Want to find out more?
